Report on "What's your perspective? - Regional & spatial LCA's for biomass resources"

Session chair: Sinéad O 'Keeffe

Minute taker: Alberto Bezama

Session: "What's your perspective? - Regional & spatial LCA's for biomass resources"

Main topics:

- Using Regionalised approaches for biomass and bioenergy systems from an LCA perspective
- Different concepts of regional approaches can be implemented
 - -Regional case study approaches
 - -Global scale with regionally differentiated approaches
- Accounting for Land use and associated impacts;
 Different integrated approaches taken/needed some;
 - -looking at socio-economic aspects
 - -looking at water use and water scarcity aspects
 - -looking at different feedstock mixes in the case of biogas agriculture, land use

Session: "What's your perspective? - Regional & spatial LCA's for biomass resources"

Main results and outcomes:

- The influences of the technical systems in the environment and its potential influence and impact is of importance
- We need to determine carefully what could be the potential use of such modelling exercises and results – how can it support policy makers effectively?
- Public acceptance and communication of results to avoid misinterpretation and make clear the uncertainties
- Different regional approaches can provide information on different aspects-but ultimately with these approaches we are looking at TRENDS

Session: "What's your perspective? - Regional & spatial LCA's for biomass resources"

Outlook and research need:

- We need to first deconfigure complex systems in order to figure out how they work, so we can then understand how to simplify them —this is a lot of work
- The availability of characterisation factors i.e. for toxic substances needs a lot of further research and it is one certain bottleneck
- Uncertainties, data availability and transparency are still an issue particularly in relation to land use changes
- Achieving the appropriate specificity when looking at the different approaches and how to include different scales of investigation
- How and to whom, can we communicate these results effectively is also a challenge that needs to be worked on
