

Filling a critical gap for top-class science at the continental scale

Die europäische Infrastruktur eLTER: Status, Standard Beobachtungen, Ausblick :-)

<https://elter-ri.eu>

Michael Mirtl
eLTER ESFRI coordinator
UFZ, Germany & EAA, Austria

Mark Frenzel
Member of eLTER General Executive Team
UFZ, Germany

Um was geht es?

- Charakteristika eLTER
- Akteure und Rollen
- Aktueller Status eLTER
- Aktueller Stand eLTER Prozess in Deutschland
- Kostenabschätzung
- Nächste Schritte

Charakteristika eLTER

= *Integrated European Long-Term Ecosystem, critical zone and socio-ecological Research*

... is a **European research infrastructure** under construction (Germany: lead country, Head Office at UFZ)

... is a pan-European **network** with >250 observation sites

... integrates **different research disciplines** from the fields of long-term ecosystem research, critical zone research and socio-ecological research

... is taking the "pulse of nature" to detect **trends in ecosystems** important for policy and society

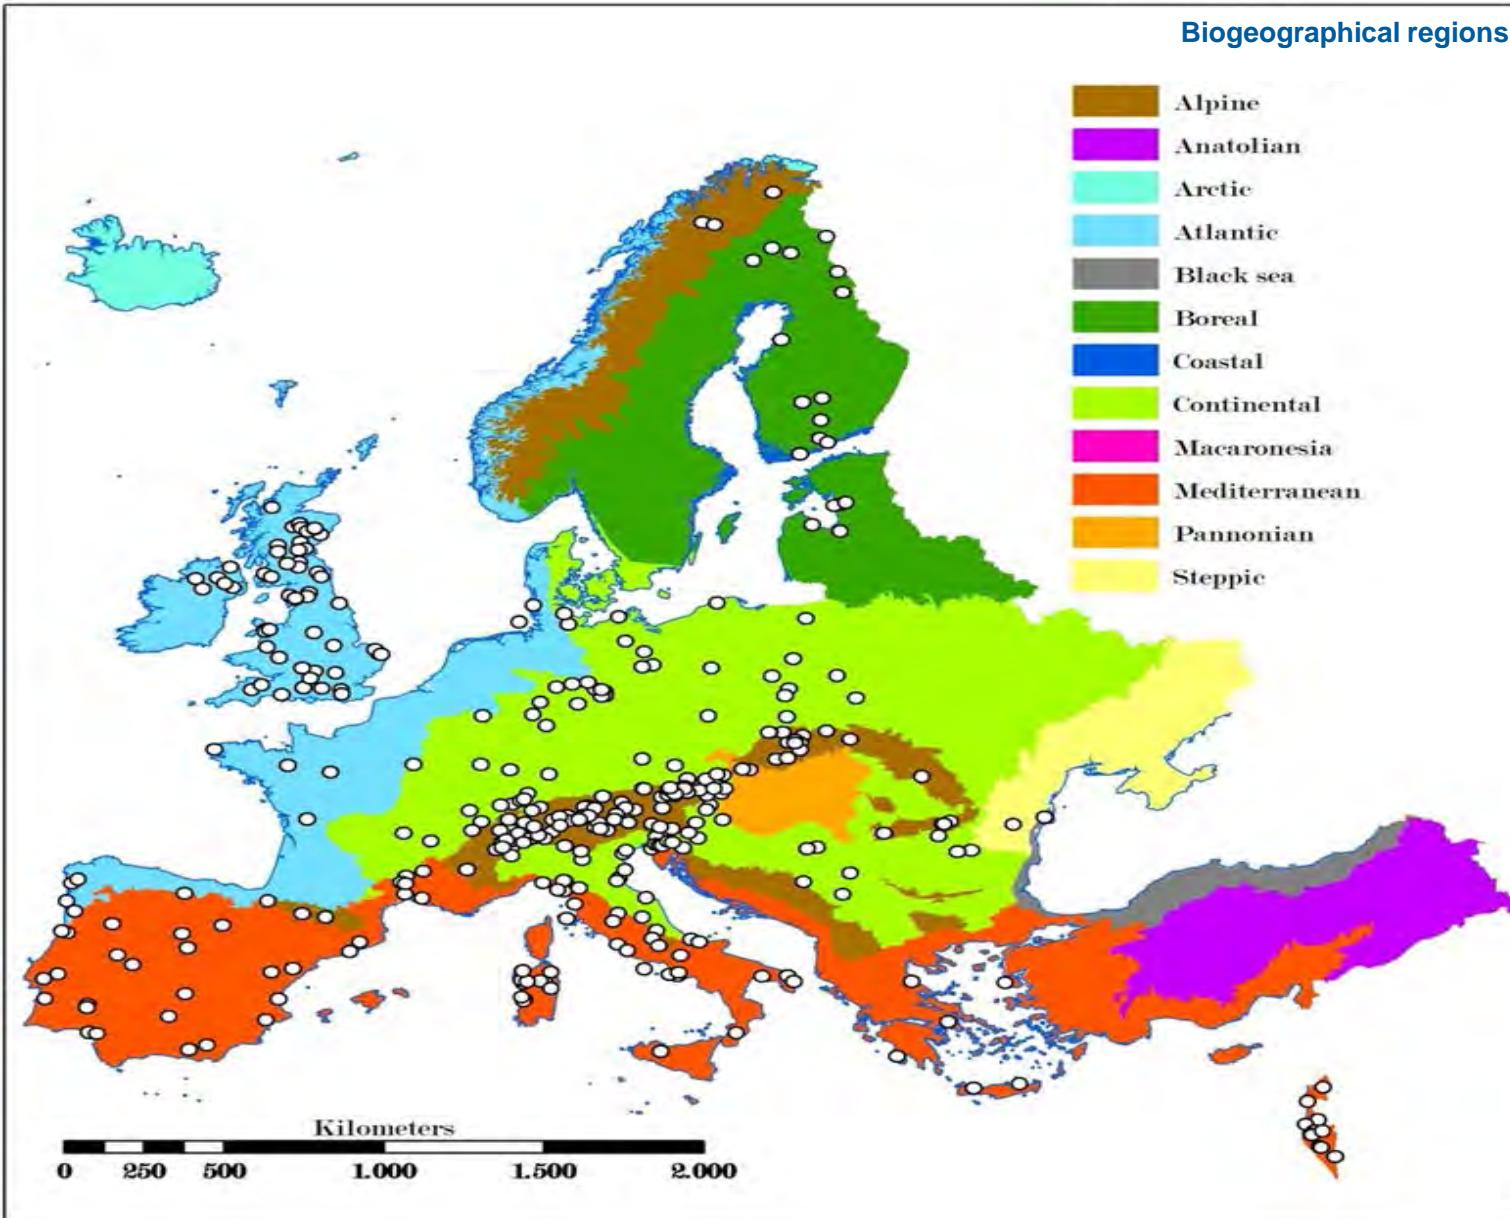

... aims to bring **environmental research and monitoring** in Europe to a **new level** through integration, harmonization and cost-effective funding

... provides **long term data**

... builds on nearly two **decades of networking** (legacy data)!

eLTER RI: geographical coverage & stakeholder support

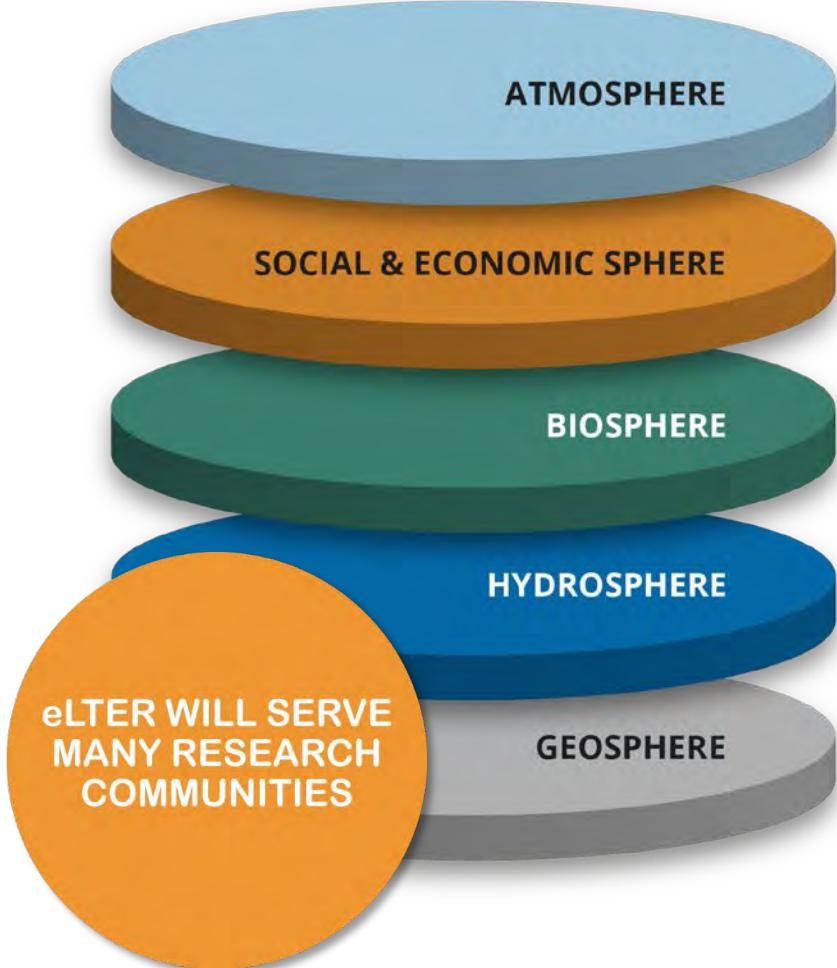

Political support (ministries):
20 countries

Scientific institutions:
165 [from 28 countries]

CAPITALIZING ON...

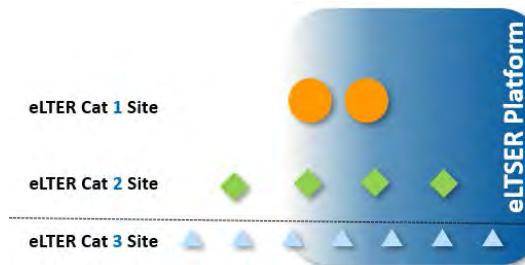

- 26 country networks
- >250 Sites
- >20 LTSER Platforms

„Whole System“-Approach: Cross-disciplinarity addressing the Life Supporting System

DESIGN

- Hierarchy of site categories
- Various levels of
 - spatial complexity
 - instrumentation

Continuous long-term operation of ~250 innovative hubs

SERVICES

- Basic site infrastructure
- Information Clusters
- Standard Observations on site ("EEVs")
- Multiple other data sources (RS, modelling)
- Data access (FAIR data)
- Analytical tools, virtual labs
- Training

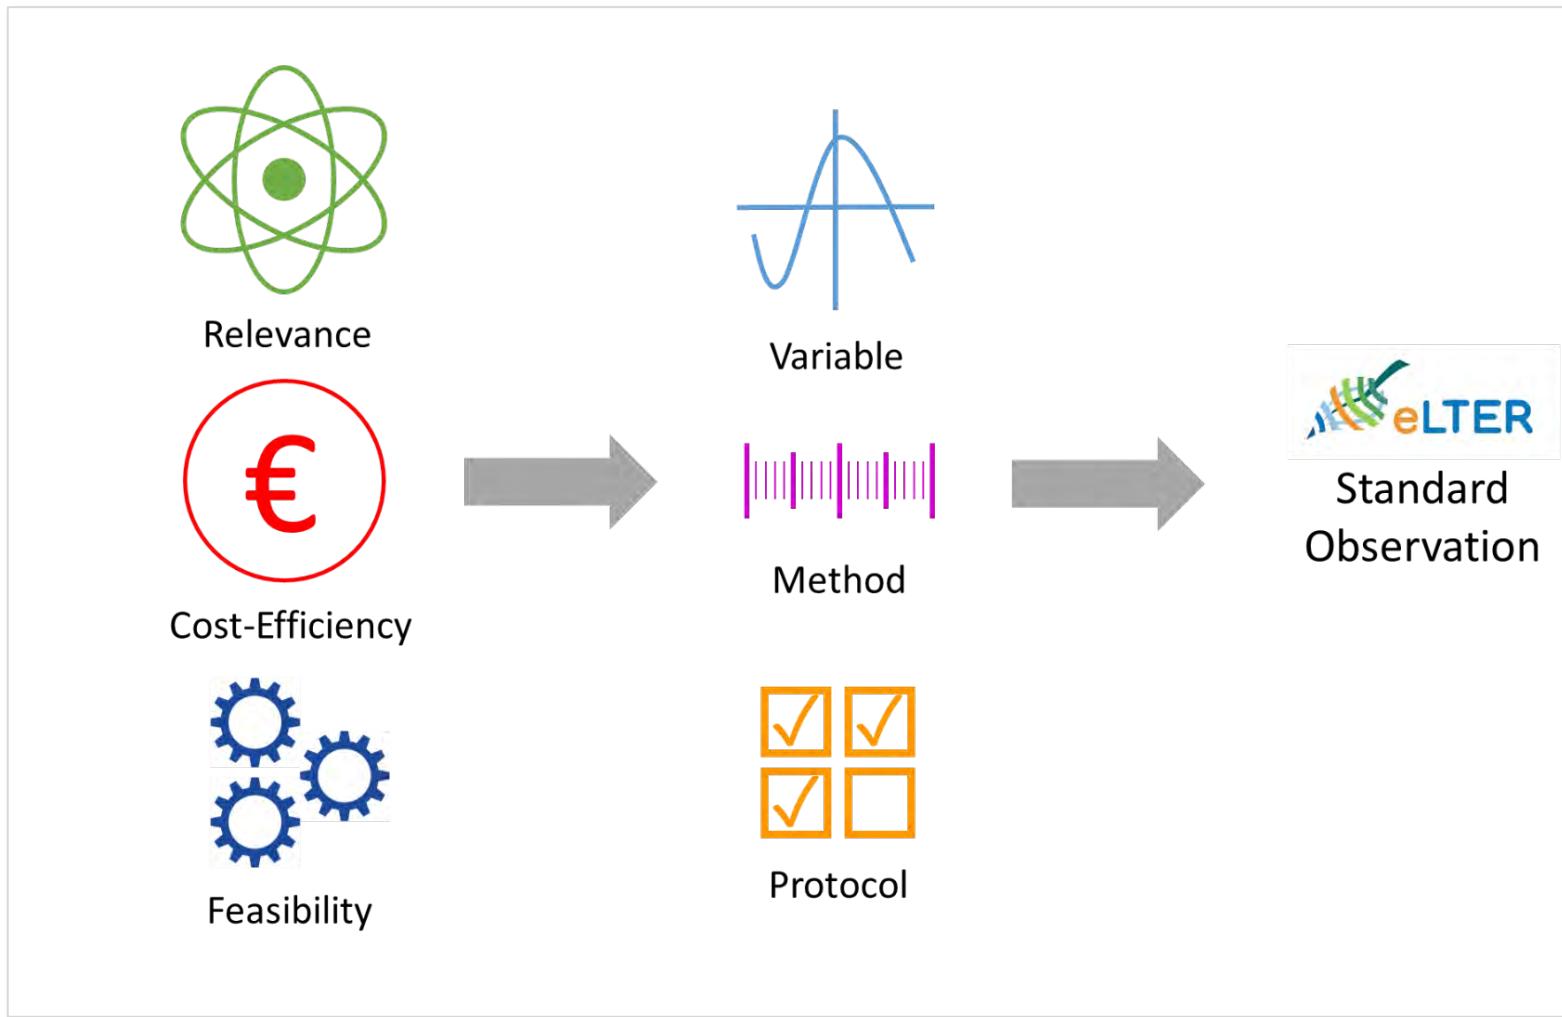

Akteure und Rollen

- **BMBF:** Deutschland als Lead Country; Finanzierung 1 Koordinationsstelle am UFZ bis eLTER
RI "fliegt"
- **UFZ:** Head Office (inhaltliche Koordination der Forschungsinfrastruktur); aktuell:
vorhandene Stellen werden aus Projektmitteln finanziert
- **LTER-D** (seit 2006)
 - deutsches LTER Netzwerk (<https://www.ufz.de/lter-d>), Verein seit 2013 (30+
institutionelle Mitglieder)
 - Deutsche eLTER Gebiete sind LTER-D Mitglieder
 - Vorstand: eLTER Anbindung durch Peter Haase (Senckenberg => eLTER PLUS Task Lead),
Mark Frenzel (UFZ => Head Office)
- ...
- **Interim Council:** Begleitung und Akzeptanz der Entwicklungsschritte durch Ministerien der
eLTER-Mitgliedsländer (Perspektive auf Kosten => *value for money*)

Aktueller Status eLTER

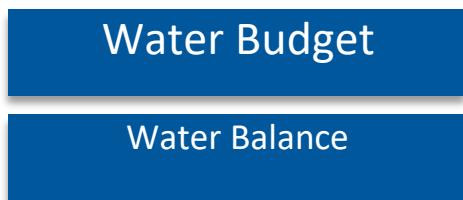

- **Standard-Beobachtungen:** Standardisierte und harmonisierte Messungen, die in den verschiedenen Umweltsphären gemacht werden sollen (Kriterien: Relevanz und Effizienz), um die jeweiligen Systeme abbilden zu können
- **Gebietskategorien:** legen den Umfang der Messungen in Abhängigkeit von den Kapazitäten und den Ambitionen der Institutionen fest.
 - Kategorie 1: höchster Standard (“Master Site”)
 - Kategorie 2: Mindeststandard (“Regular Site”)
 - Kategorie 3: Satelliten Gebiete (Kandidaten für Kat1 oder Kat2), kein offizielles eLTER-Mitglied
- **Kostenabschätzungen**
 - Standard-Beobachtungen
 - Übergreifende Infrastruktur (Services, diverse Topic Center)

eLTER Standard Observations

eLTER Standard Observations framework

(following the Ecosystem Integrity Approach)

Guiding principles

1. High **sensitivity** to system changes
2. Supporting **site comparisons** and clustering
3. Critical **relevance for modelling**
4. **Simplicity (Parsimony) => FEASIBILITY!!!**
Focus on potential for automatisation and AI technology based recognition of e.g. species

“A design too complex increases the risk of premature demise.”
(Henry Janzen, 2014)

Grundstruktur für Bestimmung eLTER Standard Observations (SO)

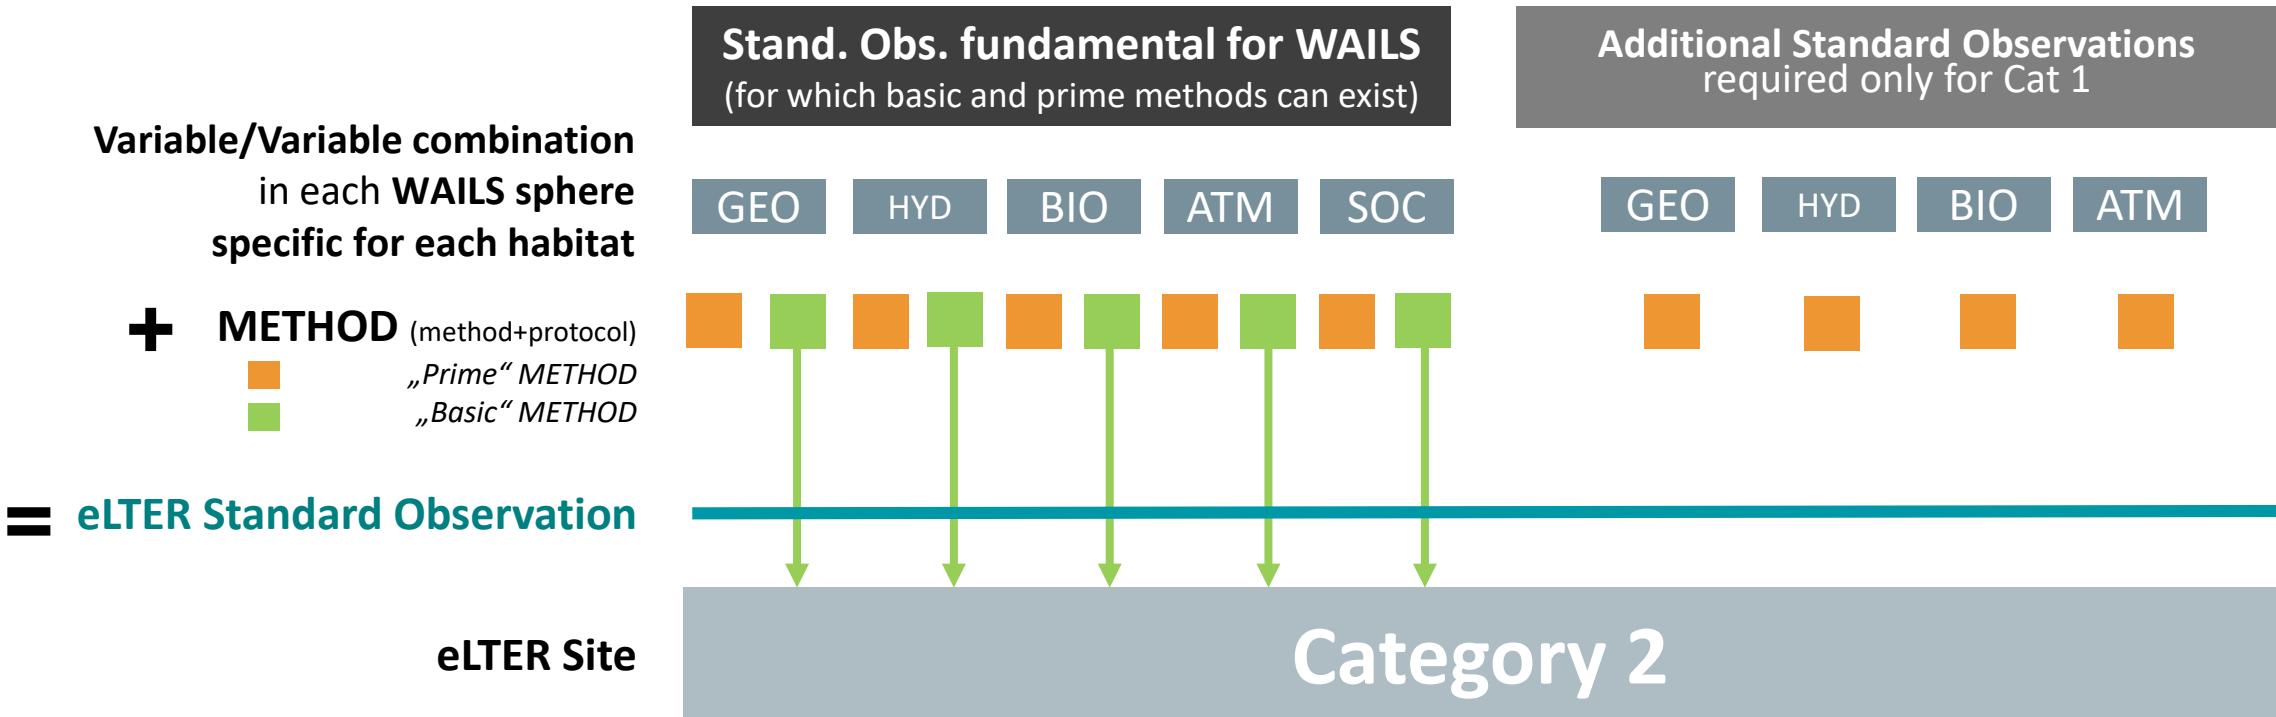

Whole System Approach (WAILS)

Sphären	Parameter (Messgrößen)	Methoden-Kategorien	Habitspezifität
1. Geosphäre	Meist <10 Parameter / Sphäre		
2. Hydrosphäre			Was ist in welchem Habitat relevant?
3. Biosphäre			
4. Atmosphäre			
5. Soziosphäre			

Site-Kategorien

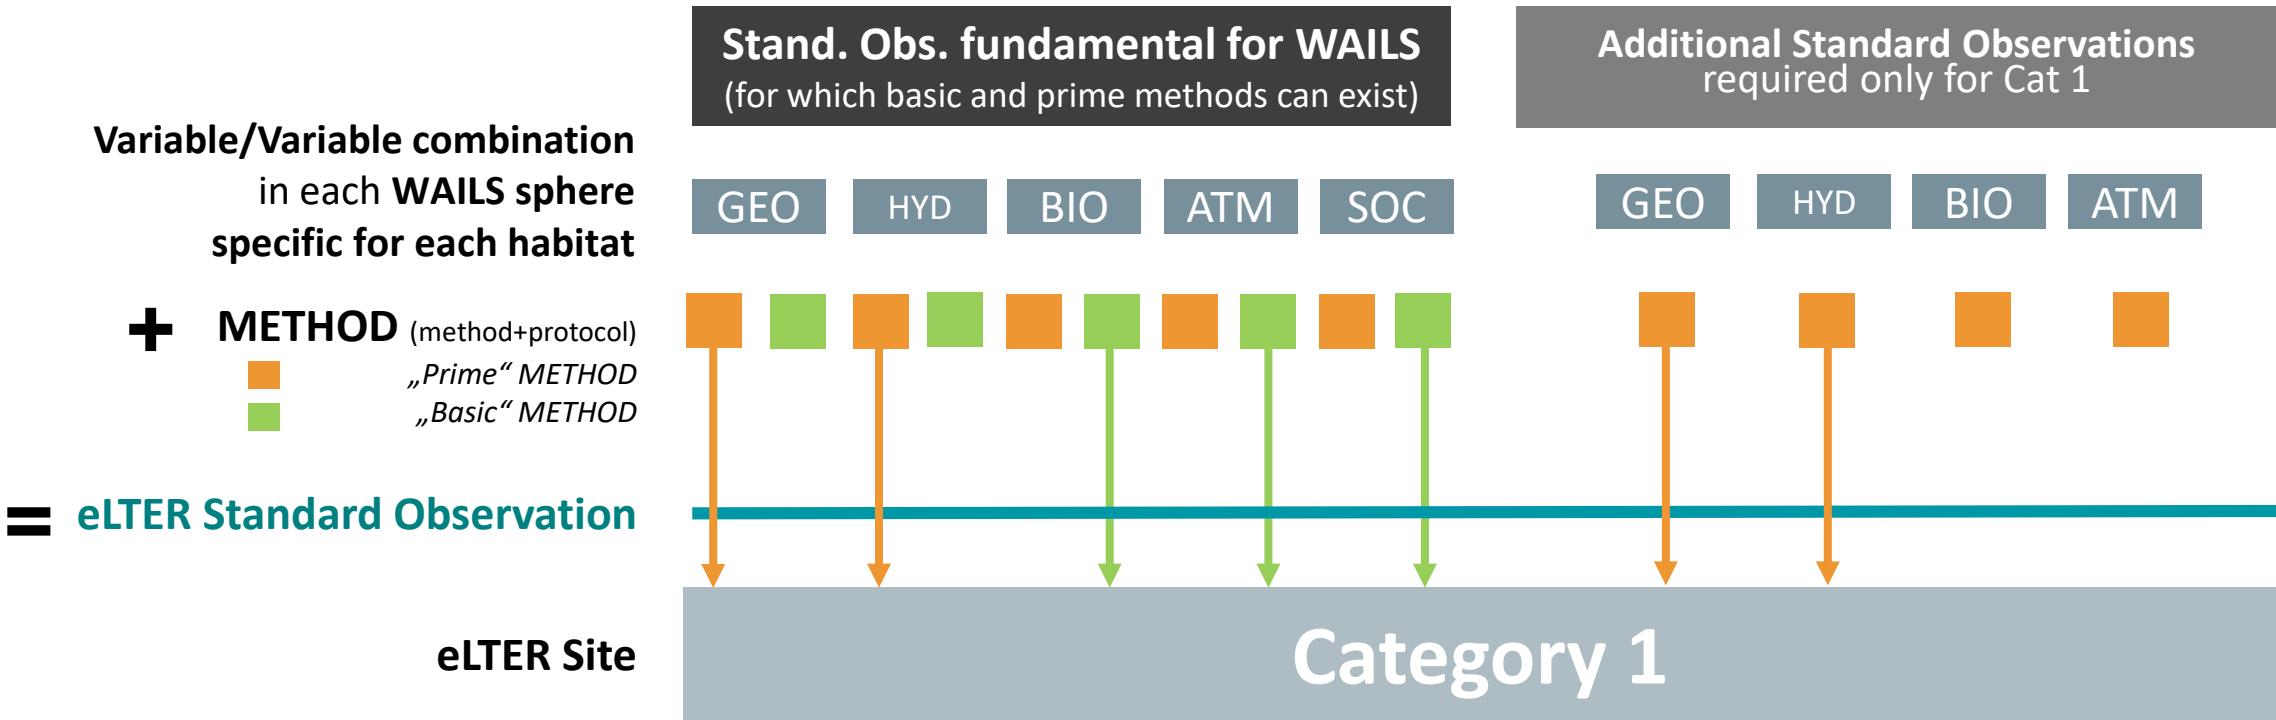

2 (einfacher)
1 (aufwändiger, also mehr Parameter & mehr Prime)

Linkage between eLTER Standard Observation Method Levels and Site Categories: *Category 2 Site*

GEO – Geosphere, **HYD** – Hydrosphere, **BIO** – Biosphere, **ATM** – Atmosphere, **SOC** – Sociosphere (remark: for SOC there are higher requirements only in LTSER Platforms)

Linkage between eLTER Standard Observation Method Levels and Site Categories: *Example for Category 1 Site*

GEO – Geosphere, **HYD** – Hydrosphere, **BIO** – Biosphere, **ATM** – Atmosphere, **SOC** – Sociosphere (remark: for SOC there are higher requirements only in LTSER Platforms)

What is labelling and what is the relevance of labelling in eLTER RI

Labeling is a procedure intended to ***characterize and certify*** the ***services, capabilities and value*** of the ***candidate LTER sites*** and platforms that may become part of the eLTER RI.

Labeling guarantees ***data reliability and quality and service availability*** across the eLTER RI.

What is the relevance of labelling for Sites and Platforms

Labeling is an opportunity for being part of an European RI, which in turn is a point of leverage for consolidation and stability in the national context

eLTER Labeling is also intended to be a mark of quality (branding)

Habitat classification of eLTER sites

(adapted from EUNIS Habitat Classification)

1. Wetlands (mires, bogs, fens)
2. Grasslands and lands dominated by forbs, mosses or lichens
3. Heathlands, shrub and tundra
4. Forests and other wooded land
5. Vegetated man-made habitats (regularly or recently cultivated agricultural, horticultural and domestic habitats)
6. Inland surface standing waters
7. Inland surface running waters
8. Coastal (transitional) waters including coastal littoral zones
9. Sparsely vegetated steppes and deserts

Example for Biodiversity SO

Standard Observation	Method
Flying insects	Malaisetrap + Metabarcoding
Vegetation composition (mainly species level+abundance)	Not decided yet
Birds, bats, frogs, insects using acoustic recording	Akustic record devices
Pollen and spores	Automated pollen sampling
Arthropods (ground-dwelling)	Not decided yet
eDNA Water	Metabarcoding
eDNA soil	Metabarcoding

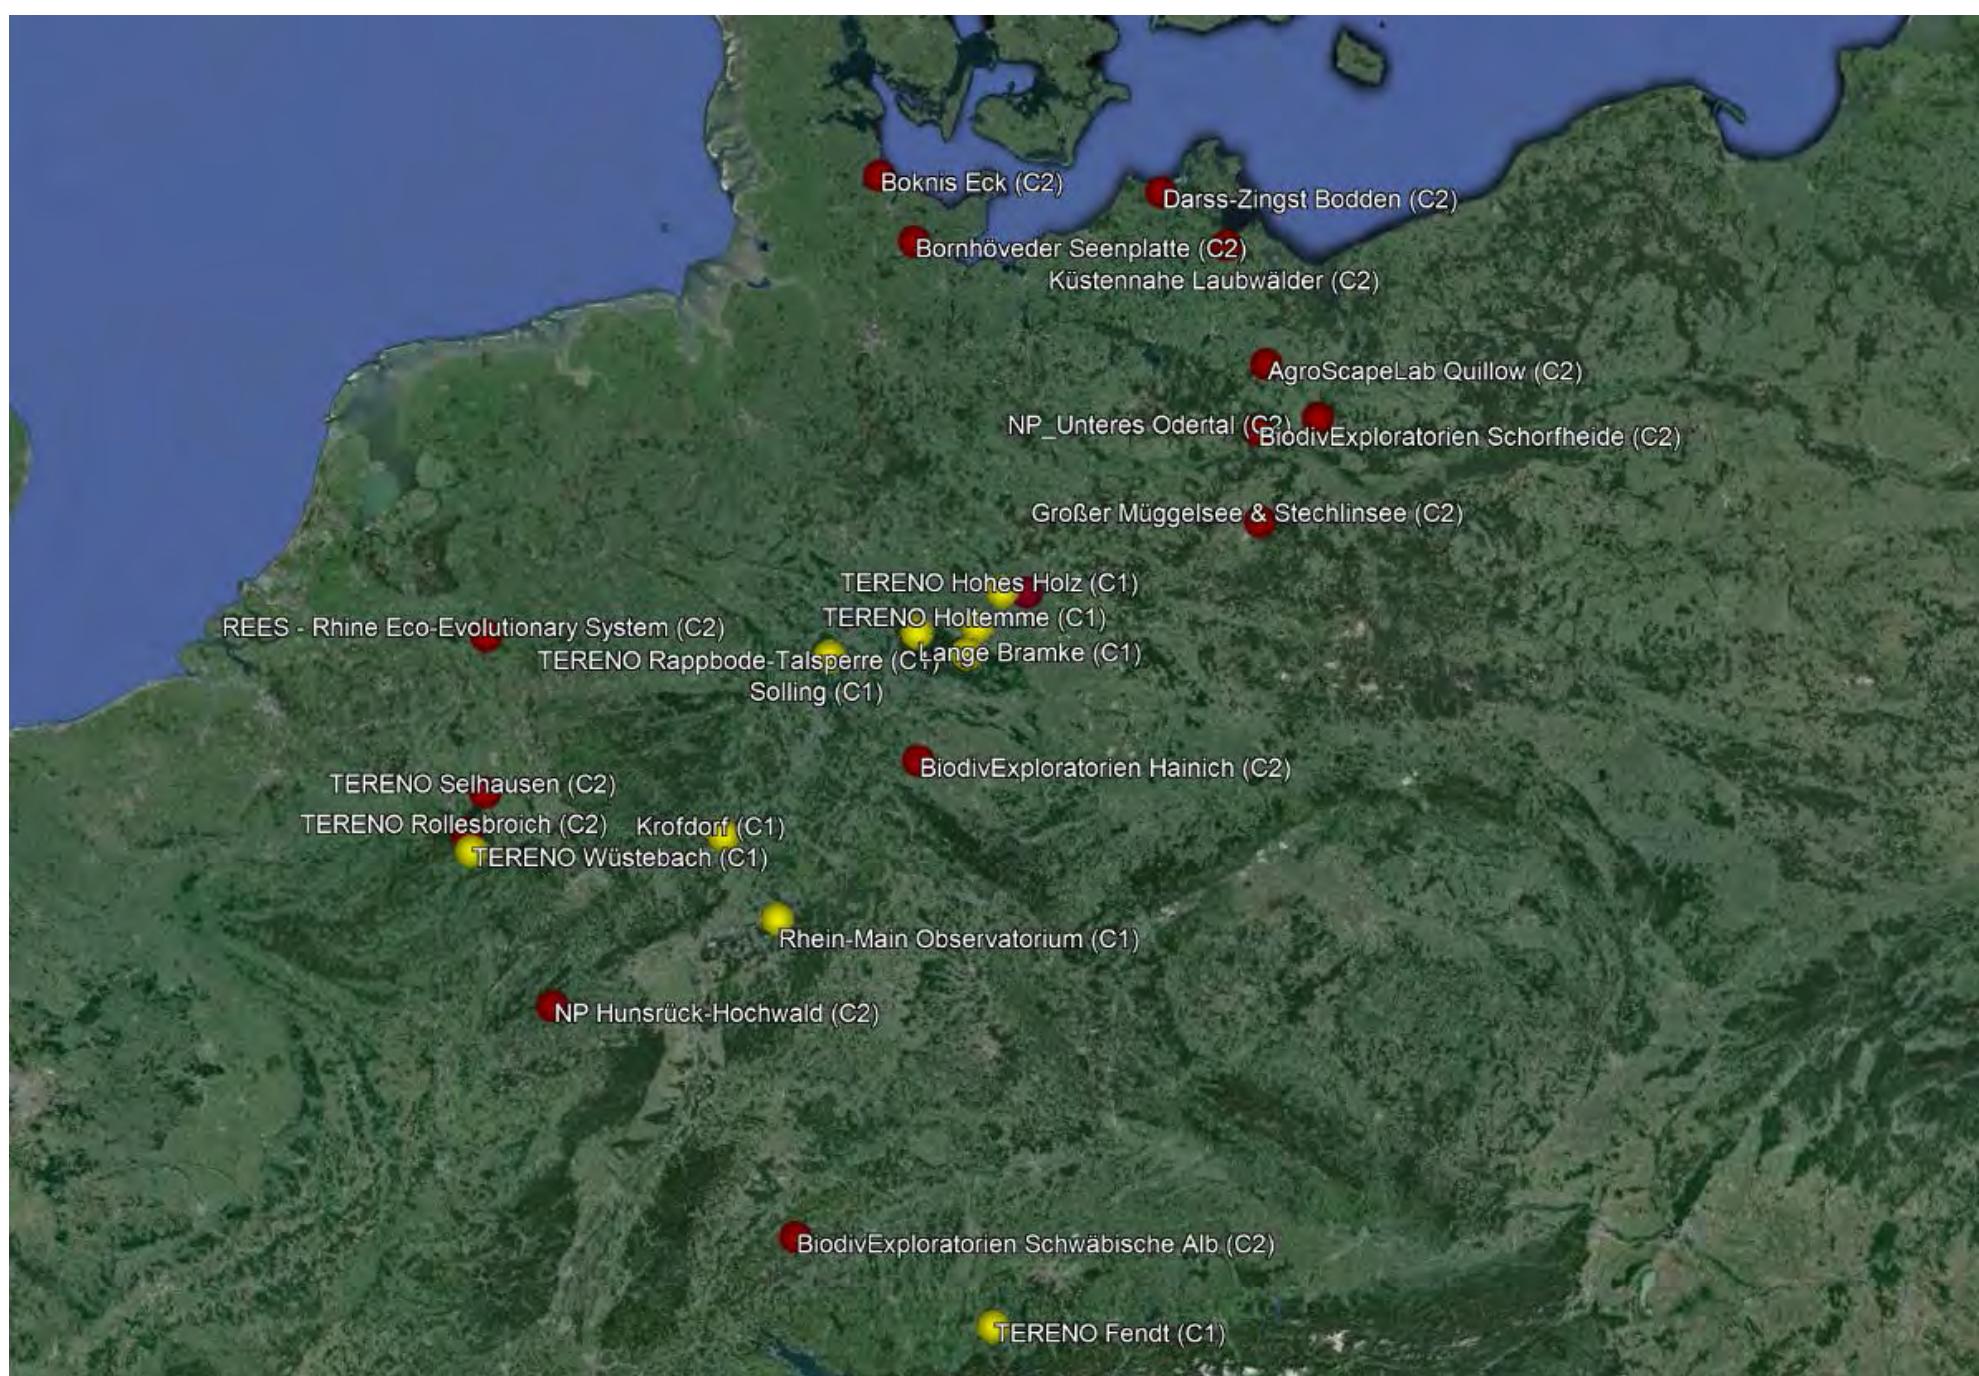

Note: this is just one of several spheres (=> whole system approach)

The overall goal is “parsimony”, thus **not exceeding e.g. 10(-20) variables for each sphere!**

Aktueller Stand eLTER Prozess in Deutschland

- **Abfrage potentielle eLTER Gebiete**
 - Juli 2023: Interessensbekundung + institutioneller Rückhalt + Kategoriezuordnung
 - 26 Rückmeldungen
 - Kategorie 1 ⇒ 0 (kann momentan kein Gebiet erfüllen)
 - Kategorie 2 ⇒ 10 (4x Kat 1 in Zukunft angestrebt)
 - Kategorie 3 ⇒ 16 (5x Kat 1 in Zukunft angestrebt)

Geographische Verteilung => s. Karte

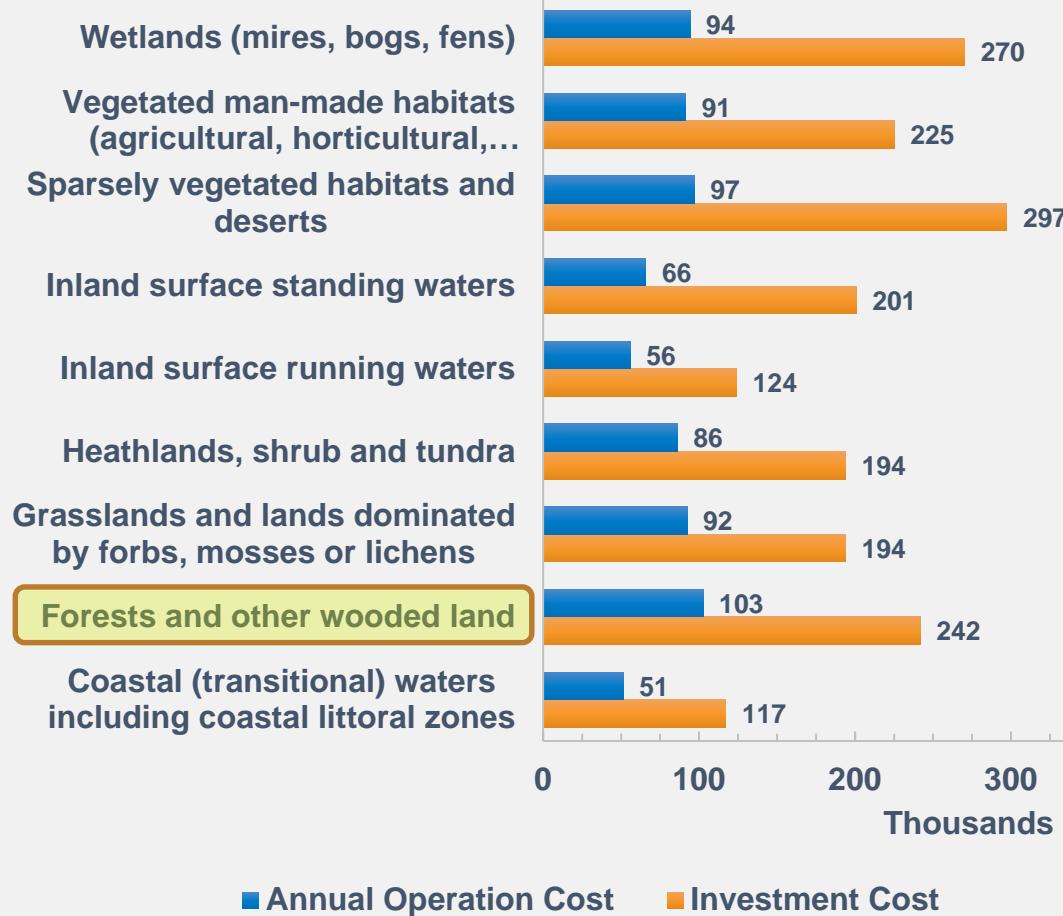

Kostenabschätzung

Basiert auf dem geschätzten Aufwand für Standard Beobachtungen:

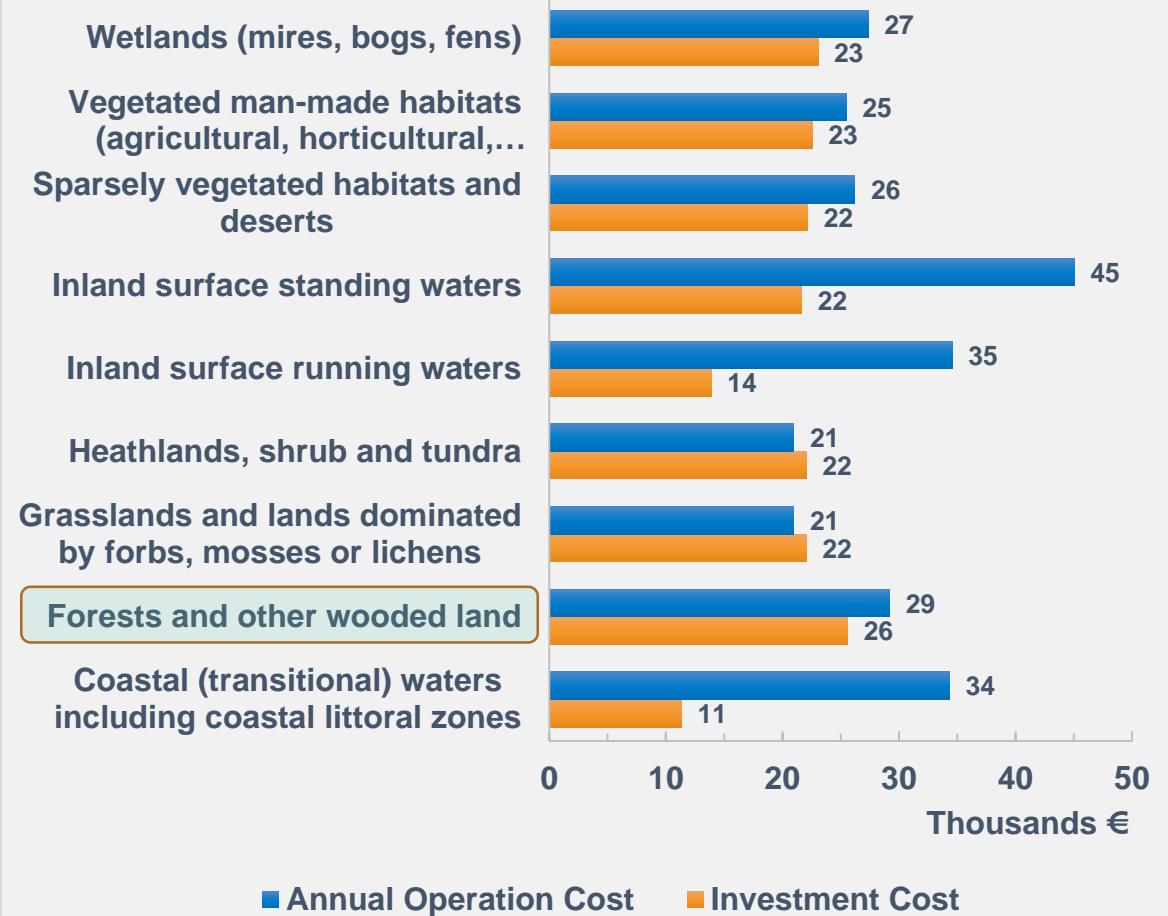

- Geräte (Investment)
- Operative Kosten (Wartung + Personal)
- **Standard-Beobachtungen:** siehe Folie für Beispiele
- **Zentrale Services und Topic Centers** (z.B. Modellierung, zentrale Analyse, Genetik, ...):
Kostenschätzungen liegen vor (Σ ca. 55 FTE)
- **Membership-Fees** (pro Gebiet): noch Gegenstand der Diskussion im Interim Council
(BIP+x); Modell für Kostenübernahme?

Habitat-Specific Investment and Annual Operation Costs of SOs (Prime & Basic Method)

Habitat-Specific Investment and Operation Costs of SOs (Cat 1/Prime Method)

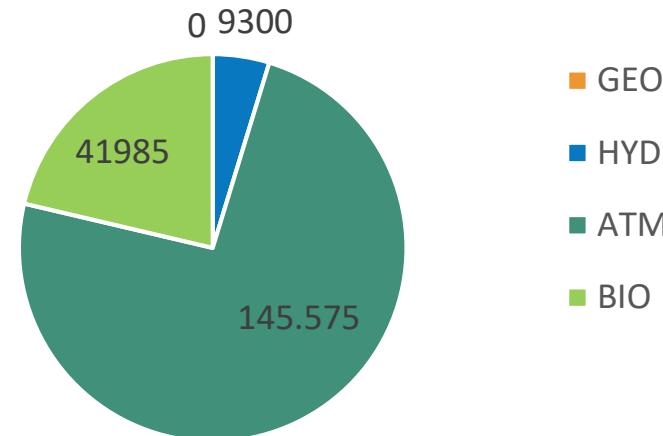

Habitat-Specific Investment and Operation Costs of SOs (Cat 2/Basic Method)

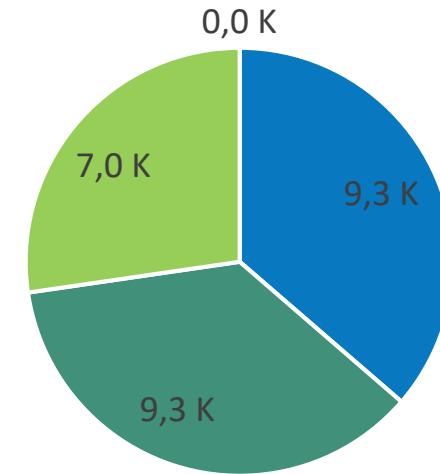

Example: ***Investment Cost*** of 'Forest & Other Wooded Land' (Cat 1 & 2)

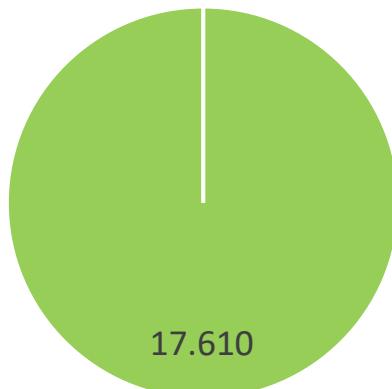

Cat 1 ⇒ 197 k€ (focus ATM & BIO)

Cat 2 ⇒ 26 k€

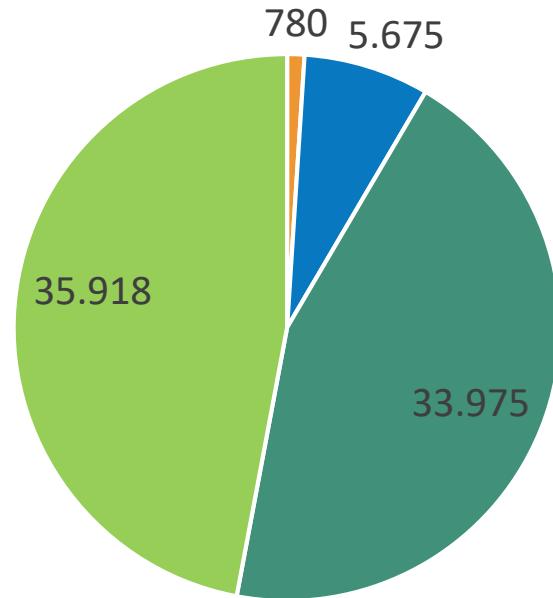

Cat 1 ⇒ 17 k€ (ATM and BIO), CASE HYYTIÄLÄ
(co-location)

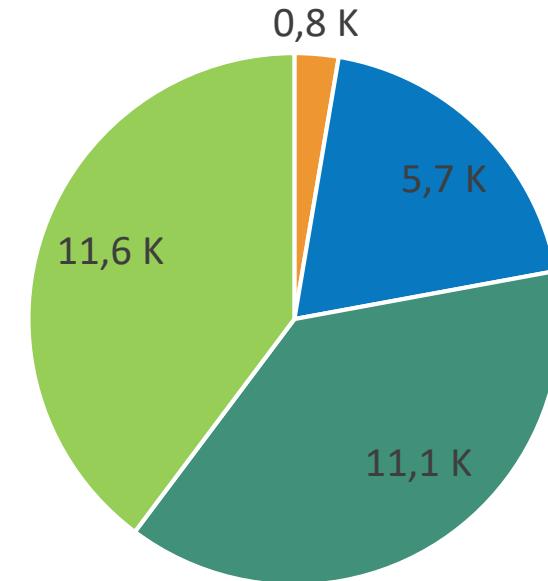

Example: ***Annual Operation Cost*** of 'Forest & Other伍ooded Land' (Cat 1 & 2)

Cat 1 ⇒ 76 k€/a (ATM and BIO)

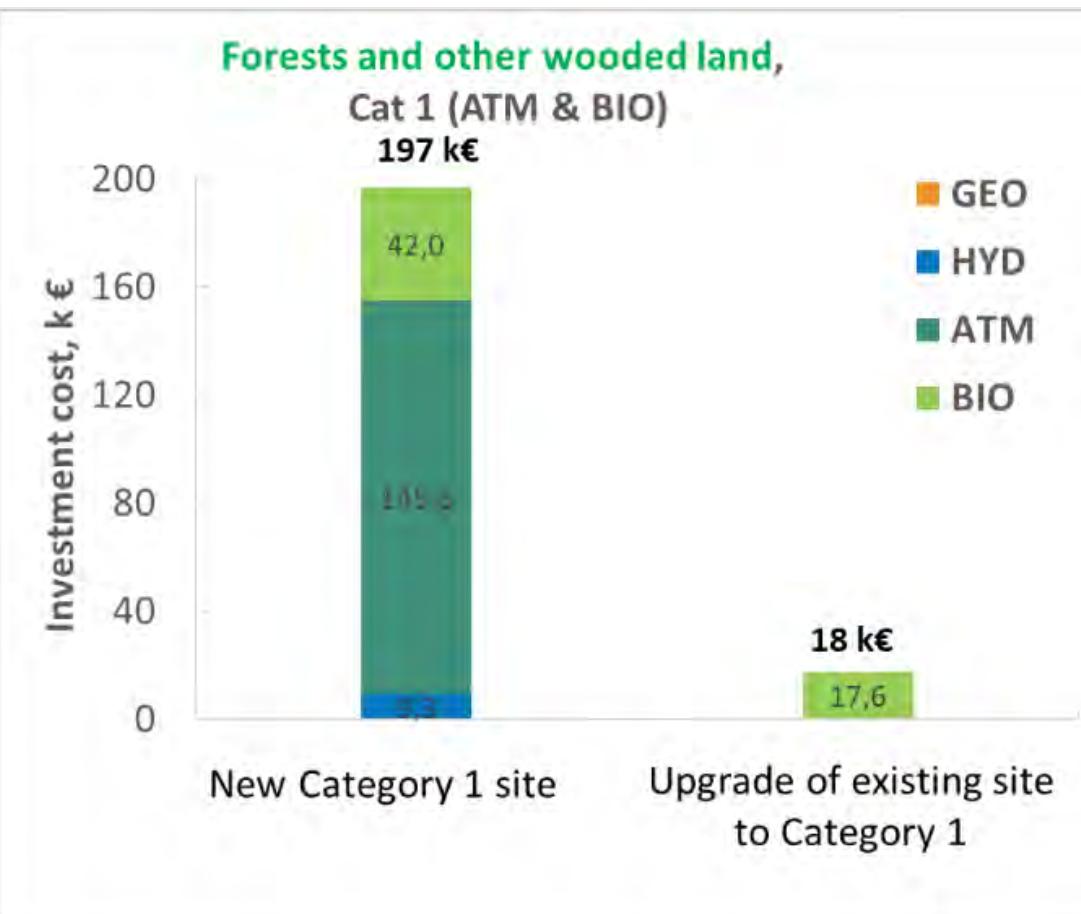

Cat 2 ⇒ 29 k €/a

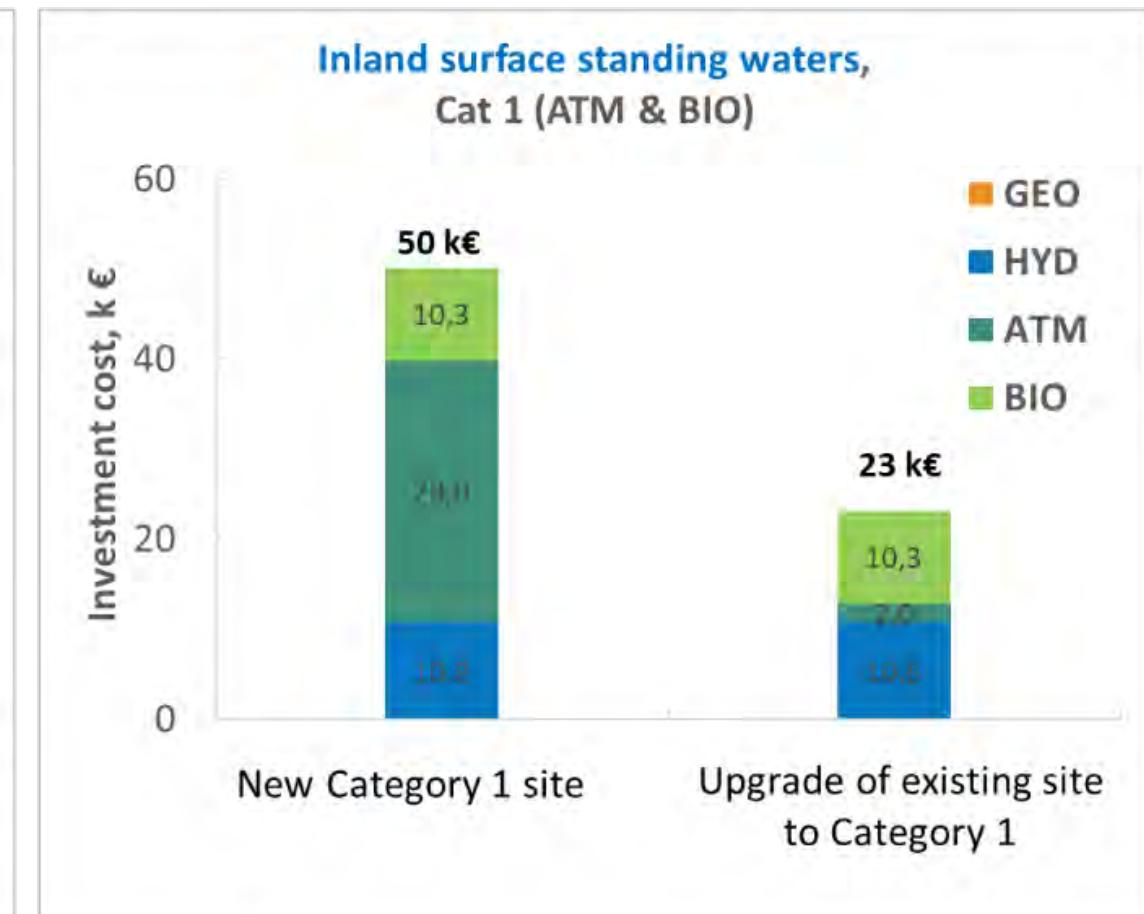

Comparing investment cost for a collocated site with a new site (1/2)

FOREST SITE

LAKE SITE

Der eLTER SO Abakus

Kostenkalkulation für Kategorie 1 und Kategorie 2 Gebiete
